

32" Mirror TV

Empowered by ActiveMania, This intelligent Mirror-TV represents the butler of the modern world.

aimirror 301 – Butler Edition is a speech enabled, 3D animated virtual character of a senior male house manager in a well-to-do household.

aimirror 301 – Butler Edition is a robust, powerful, and visually appealing Mirror-TV designed to satisfy all user's needs while adding an aesthetic touch to your interior.

When switched off or on sleep mode, the Mirror-TV features an elegant mirror; when switched on or when triggered by any change in your environment (your presence, guest arrival, missed call, email, important & preferred News), this Mirror-TV radiates with the reflection of recent changes.

From announcing guests and notifying you of missed calls, visitors and emails, to displaying current events in a 3D animated approach, to alerting you that the Jacuzzi water is fully heated or your meal is fully cooked, to welcoming you in a unique fashion upon arrival, to updating you of weather conditions, and/or to streaming important and filtered content, **aimirror 301 – Butler Edition** accommodates you every step of the way!

aimirror 301 – Butler Edition Features:

- Announcement of useful information using TTS technology.
- Display of events by motion using 3D animated scenery.
- Weather information display for a primary location and four additional secondary locations. Weather information can either:
 - be viewed in a static screen for all locations,
 - can be presented by the butler himself using speech and animation for the primary location
- IP Camera feed from any location equipped with IP Camera. Such an event can either:
 - Be based on a scene
 - Or triggered by a sensor or other scenario enabled devices.
- RSS feed from two different sources (Arabic or English)
 - Display news headlines in a static screen.
- History Retrieval to show the latest actions that have occurred while the tenant is away. The history is displayed in text messages

- The butler is a smart component and as such can participate in any intelligent scenes and scenarios programmed on aibrain.
 - Streaming Audio
 - Reflect updates on all home appliances and automation components
 - Be triggered by the welcome scene
 - Etc...
